Mythic Computer releases Apollo Collection

June 25th, 2024

Mythic Computer is proud to announce the launch of its first publicly available set of works, the Apollo collection. Previously, Mythic worked exclusively with individual clients to design bespoke computers.

The collection is limited to 27 pieces. Each piece is made-to-order by hand at the Mythic workshop in Ojai, California. Pricing is available upon inquiry.

Each Apollo consists of three parts: a main body where the computer is housed, a portable screen, and a magnetically-attached screen stand.

Pieces can be ordered in one of three hardwood species: walnut, cherry, or maple. A full grain, vegetable tanned, Tuscan leather palm rest is standard. Custom circuitry and a bespoke operating system were designed specifically for this collection.

All of Mythic's work is born from a love of computers and a deep dissatisfaction with the way they look and feel. The Apollo collection reflects Mythic's vision of a world where computers can be highly designed objets d'art, as opposed to commodified blocks of plastic and metal.

A distinct massing and ornamental details are inspired by the sinuous freedom of nature. Focus on ritualistic tactility through a keyed power switch, aluminum volume/brightness dial, and hand-tuned mechanical keyboard creates a totally new type of relationship between owner and machine.
